Web/Javascript/React Developer - Front-End Developer

OBJECTIVE

Passionate and motivated professional on a transformative journey from a seasoned Senior Quotation Analyst to a Web, JavaScript, and React Developer, seeking opportunities to leverage transferable skills and pursue a successful career in web development.

EXPERIENCE

Jul 2022 - Present

Web/Javascript/React Developer - Front-End Developer (Self-Study)

- Following my departure from my previous role in January 2022, I embarked on a dedicated journey to become a proficient Web/Javascript/React Developer.
- Having a computer programming background using Pascal and Turbo C way back then, the logic and algorithm were preserved in me.
- Leveraging online resources such as Udemy and YouTube, I engaged in comprehensive self-study to acquire essential skills and knowledge in web development.
- My self-study efforts culminated in the successful completion of the Udemy Web Development course, leading to the attainment of a [The Complete 2022 Web Development Bootcamp certificate](#).
- During this period, I tackled a range of projects, honing my expertise in HTML, CSS, JavaScript, React, and related technologies.
- My proactive approach to self-study has equipped me with the ability to develop responsive web applications and user-friendly interfaces, underscoring my commitment to transitioning into a Web Developer role.
- Eager to contribute my newly acquired skills and passion for web development to a professional team.
- In few months of self learning (November 2022), I am able to create my first project - MasterMind Game. This is not just the usual MasterMind game. It has different levels of difficulties. Pretty addicting to play, especially if the player is competitive and wants to finish all levels. Please see my [portfolio](#) for details of my projects.

May 2012 – Jan 2022
